Science students from Michael Reynolds class at Carson High School had the chance to take a tethered hot air balloon ride on Tuesday. Karalyn Mumm, owner and commercial pilot of the balloon 'Citrus in the Sky,' provided tethered hot air balloon rides on the front lawn at CHS. Reynolds, CHS science teacher and military veteran, said each student had been studying not only the science necessary for flight including the outside air temperature, weight, buoyancy and the temperature inside the balloon, but also other factors including weather, wind shear and gases. The outdoor aerial demonstration served as the lab portion of the course work.
